NAME
wimjoin− Join a split WIM into a standalone WIM

SYNOPSIS
wimjoin [*OPTION*...] *OUT_WIMFILE SPLIT_WIM_PART*...

DESCRIPTION
wimjoin, or equivalently **wimlib-imagex join**, joins the *SPLIT_WIM_PARTs* into a standalone (one-part) WIM *OUT_WIMFILE*. All parts of the split WIM must be specified; you probably want to do so using a shell wildcard.

OPTIONS
--check
When reading each *SPLIT_WIM_PART*, verify its integrity if it contains extra integrity information. In addition, include extra integrity information in *OUT_WIMFILE*, even if the split WIM parts did not contain this information.

--include-integrity
Include extra integrity information in *OUT_WIMFILE*, i.e. like **--check** but don't also verify the split WIM parts beforehand.

EXAMPLES
Join a split WIM, with the parts named 'windows*.swm' where the * is anything (usually the number of the part, except for the first part which may have no number), and write the joined WIM to the file 'windows.wim'.

      wimjoin windows.wim windows*.swm

NOTES
Both non-pipable and pipable split WIMs may be joined.

wimjoin is roughly equivalent to:

      wimexport *SWM_PART_1* --ref="*SWM_GLOB*" all *OUT_WIMFILE*
